Kunal Anand 202318057 Big Data Assignment-3

Mapper.py

Shebang Line:

Specifies Python 3 interpreter.

Importing sys Module:

- sys module for system-specific functions.
- Provides access to system parameters.

Loop through Input Lines:

- Iterates over each line of input.
- Reads from standard input.

Stripping Whitespace:

- Removes leading and trailing whitespace.
- Ensures clean input.

Splitting Lines into Words:

- Splits lines into words.
- Based on whitespace.

Emitting Key-Value Pairs:

- Prints word and 1.
- Separated by a tab.

Reducer.py

```
#!/usr/bin/python3 -0
import sys
# Initialize variables to keep track of current word and its count
current word = None
current_count = 0
# Loop through each line in the input
for line in sys.stdin:
    # Split the line into word and count, separated by tab
    word, count = line.strip().split('\t', 1)
    # Convert count to integer
    count = int(count)
    # If the word is the same as the current word, increment its count
    if word == current word:
        current count += count
    else:
        # If the word is different, print the current word and its count
        if current word:
            print(current word,"\t",current count)
        # Update current word and its count
        current word = word
        current count = count
# Print the last word and its count
if current word:
    print(current word,"\t",current count)
"reducer.py" 33L, 863B
```

Shebang Line:

Specifies Python 3 interpreter.

Importing sys Module:

- sys module for system-specific functions.
- Provides access to system parameters.

Initialization:

- Initialize variables for word and count.
- current_word and current_count.

Loop through Input Lines:

- Iterates over each line of input.
- Reads from standard input.

Splitting Lines into Word and Count:

- Splits each line into word and count.
- Separated by tab, limiting to one split.

Converting Count to Integer:

- Converts count from string to integer.
- Ensures numerical operations.

Incrementing Word Count:

- Increments count if word is the same.
- Accumulates count for the same word.

Printing Word Count:

- Prints current word and count.
- Separated by tab.

Updating Current Word and Count:

- Updates current word and its count.
- Prepares for the next word.

Printing Last Word and Count:

- Prints the last word and its count.
- Ensures all counts are accounted for.
